

# THE CARBON REPORT

**THE CARBON REPORT SIMPLIFIES GHG EMISSIONS** reporting complexity, incorporating best practice and recognised standards into an easy to use, cost effective and scalable application.

## Solution Overview

Understanding your carbon emissions is for many a daunting and complex process. It requires skill, expertise and time which all come at significant cost to interpret your business data and ensure that current, correct emissions factors are applied to calculate your footprint. The Carbon Report simplifies this complexity, incorporating best practice and recognised corporate standards into a cost effective tool.

The cloud based solution, delivered via an annual subscription, guides users through an intuitive process of identifying and capturing emissions.

Mandatory emissions such as company owned vehicles and electricity consumption are covered as well as an extensive list of non-mandatory emissions.

The end product: a summary and detailed inventory report, based on the Greenhouse Gas Protocol Corporate Accounting Standard, which can be used for communication to key stakeholders. More importantly, the report can be used as a baseline to measure future emissions savings.

Your emissions data is reviewed by our team of experienced analysts to ensure that the report meets the requirements of the GHG Protocol.

The Carbon Report has been designed for scalability across all organisations. These range from small companies operating as a single entity to large corporates struggling with data collection and collation.

## PRODUCT FEATURES

- Hosted solution
- Simple and intuitive interface
- Save work in process
- Extensive help content
- Maintenance of country specific factors
- Both summary and detailed report output
- Complies with the GHG Corporate Accounting Standard
- Scalable
- Report review
